#### Zusammenfassung

Der bevölkerungs- bzw. systembezogene Ansatz von Public Health ist ein kritisches Element für die nachhaltige Weiterentwicklung eines Gesundheitswesens und zur Verminderung gesundheitlicher Ungleichheiten. Er ist angesichts der globalen gesundheitlichen Herausforderungen unverzichtbar. Die Bedeutung von Public Health für die Gesundheit der Menschen wird in Deutschland jedoch institutionell nur unzureichend widergespiegelt. Dies gilt für Forschung und Lehre, den Öffentlichen Gesundheitsdienst und auch für Querschnittsbereiche, in denen Public Health nicht ausreichend repräsentiert ist. In der Vergangenheit gab es verschiedene Initiativen, um die historisch bedingten strukturellen Defizite in Deutschland aufzuarbeiten und die Rolle von Public Health zu stärken. Das hier vorgelegte White Paper soll eine Diskussion über

#### Abstract

Public health is a population- and system-based approach that is needed to improve the health of societies and to decrease health inequalities. In the face of global challenges, the public health approach is essential. In Germany, the importance of public health is only partly reflected by its institutions and institutional arrangements. This applies equally to research, teaching and training, as well as to the public health service. Furthermore, the public health perspective is not sufficiently considered in cross-sectional topics that are relevant for health.

There have been several initiatives to overcome structural deficits which can partly be traced back to historical circumstances. The White Paper presented here should encourage discussions about future policy options in public health. The authors represent public health in practice, rese596 Zur Diskussion Public und Global Health in Deutschland stärken – Eine Einordnung der Stellungnahme "Public Health in Deutschland" der wissenschaftlichen Akademien vom 16.6.2015 Strengthening Public and Global Health in Germany – an Appraisal of the Statement "Public Health in Germany" by the German Scientific Academies from June 16th 2015 Autoren A. #### Where are we now?

# Public Health in Germany is influenced by national and international developments

- Diseases and health challenges do not stop at national borders
- Health transitions are a major global public health challenge
- International cooperation is essential for effective national public health protection

#### Where do we want to go?

## The international dimension of national public health:

#### **Goals of RKI**

- International involvement to shape a global Public Health
  - Strong partnerships with international institutes
  - Strengthen supranational Public Health structures
  - Promote an international approach to One Health

Development of criteria for selecting countries as focal points to create synergies in international activities

#### Where do we want to go?

### The international dimension of national public health:

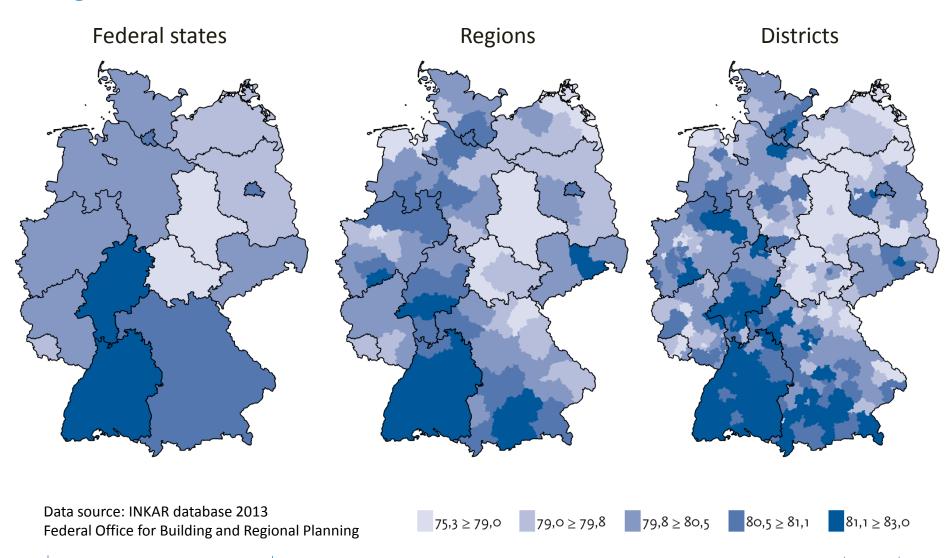

#### **Goals of RKI**

- Focused cooperation on important public health issues
  - Meet challenges of international dimension, like obesity
  - Improve surveillance
  - Identify interventions
  - Promote evidence-based public health
- Efficient generation and use of resources
  - Creating synergies through exchange
  - Cooperation with relevant stakeholders
  - Build up of health crisis reaction capacity

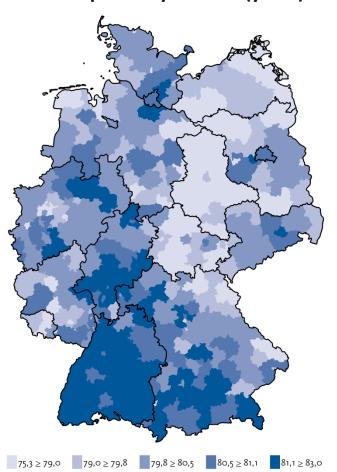

# Public health challenges: Life expectancy at birth in Germany – regional differences

## Public health challenges: Life expectancy at birth, unemployment rate in Germany

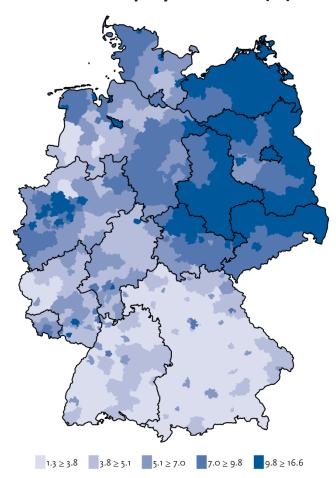

Life expectancy at birth (years)

Data source: INKAR database 2012

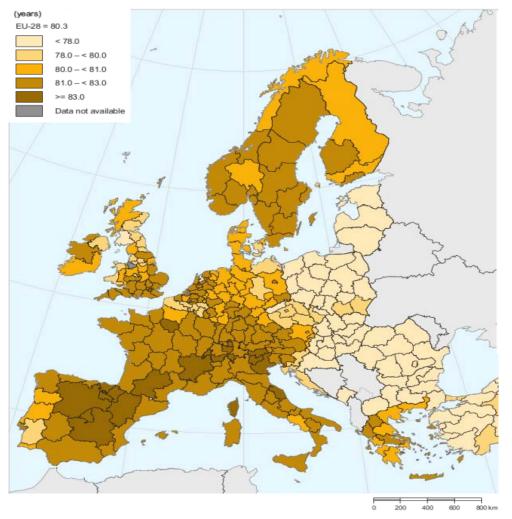

Federal Office for Building and Regional Planning

**Unemployment rate (%)** 

Public health challenges: Life expectancy at birth, by NUTS 2 regions (2012)

## **Public health challenge: Healthy Ageing**

Public Health monitoring in the population 65 years and older

How to reach older people in different setting?

At home independently Community-dwelling with support/care Institutional iong-term care

How to get health information relevant to the needs of specific subgoups?

Specific indicators

Core indicators for all

- Include high age groups into the health monitoring system (e. g. those living in long-term care institutions)
- Refine methods to improve health monitoring in older people
- Analyse changes in health needs across the life course

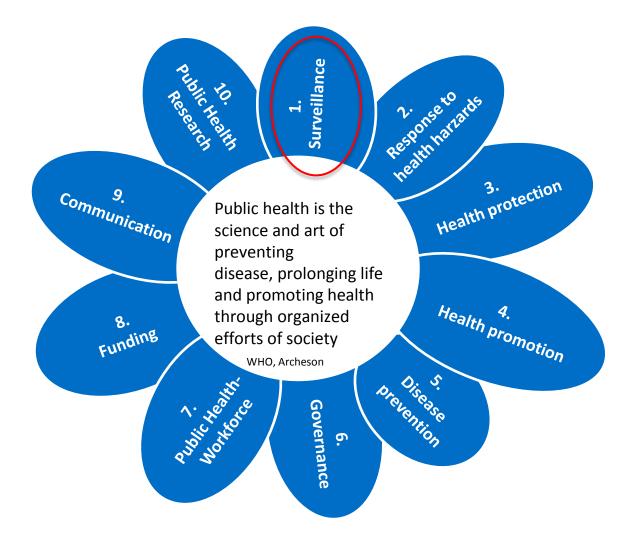

## Healthy Ageing: Where do we want to go?

- Establish 'Healthy Ageing' as a crosscutting Public Health issue
- Build a sustainable database for monitoring 'Healthy Ageing' and evaluate health policy effects at the population level
- Strengthen Public Health research exchange on 'Healthy Ageing' with Public Health institutes in Europe and abroad

### (New) challenges to Public Health – need for international co-operation

## **Examples**

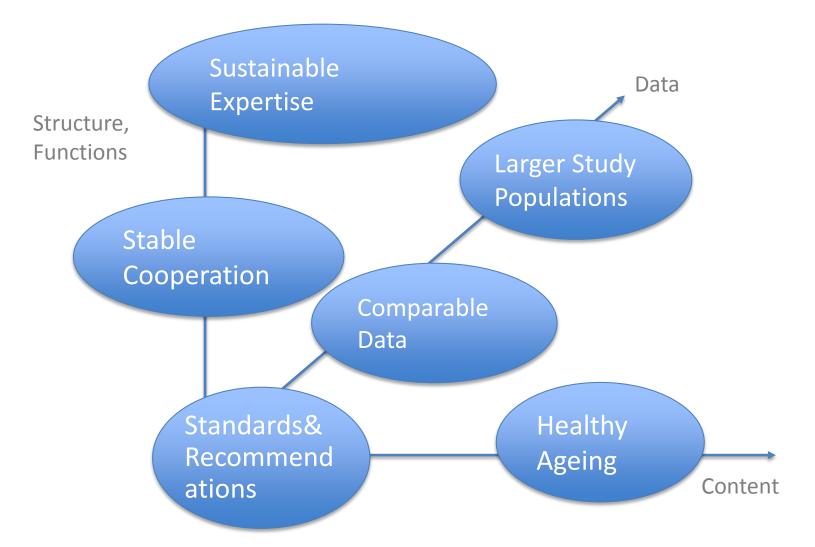

- Migration
- Globalisation
- Ageing Society
- Digitization/Big Data
- One Health
- Antimicrobial Resistence
- Climate Change
- Social inequality in health
- Re-emerging infections

## **(New) challenges to Public Health –** enhancing Public Health by a sustainable EU-infrastructure

## Thank you
